

"Youth and the Environment: Call for a new AOF."

Hello Mr. Hewko,

My name is İrem Koçar from Rotaract Club of Kyrenia Liman. Two weeks ago I met Michel P. Jazzar in Kyrenia at North Cyprus. Me and my Rotaract friends talked about our future plan for this club and what we did in the past. End of the conversation Mr. Jazzar asked me a question. He said 'why did you attend this club, what is your dream about the future, what is the most important issue or problem...' therefore, I replied that I came to this club because I want to change something. Maybe it will not a big for this world but I want to be a butterfly in the storm. I think the most important thing is that protect nature but mostly we forgot it. I'm a psychology student at METU NCC and psychology is a study of humankind. However, if we want to understand a human nature firstly we must look at the where human being begins. Let me explain this; many many years ago, in ancient times, we have been lived in a mother nature. There were no strength buildings or houses, we were living in caves and trees. In time, we improved and build our world differently. In the 21st century, we are very far away from our main world, hence; we started to destroy our breath (trees), our soul (oceans) and our friends (forests). Mainly, we started to kill ourselves. As long as we move away from nature we will continue to destroy ourselves. In brief, I tried to explain these to Mr. Jazzar. After this conversation, he explained to six main area to Rotaract and there weren't the environment. Because of this, he wanted from me to write this mail to you about this conversation. Because I want to save nature, for instance; I want to teach people how nature is an important part our lives. Sorry for my English but I hope I explain myself.

Thank you,
İrem Koçar
